Loading We're sorry to report that players of the Xbox One X version of Anthem will lose access to the game's online features once the console's February 21 system update arrives. It's unclear at this time how easy or difficult it will be to manually transfer your progress from the Windows PC version of the game.As for why Anthem chose to shift to PC, BioWare says it is a "strongly considered" decision, which will affect some of its other games as well. Make sure to visit what he thinks is the best website in the world, but is actually just his Twitter pageQ: What is the difference between JSON and JASON? From my understanding JSON is a subset of JASON and there are other other XML and even YAML. What am I missing? A: As noted by @curioso, JASON is usually used when the precise type of data is not important (eg: response data from a web service, etc.) whereas JSON is usually used to encapsulate data that is about to be sent to a client/user. Also, JASON will have some specific characteristics of the data that it encapsulates, while JSON is expected to be a human-readable data format. For example,

Author: NyarrHackem (classification of abalones (genus Abalone). 1. The suborder Ostreoida, in which Abalone is found, is classified as having an ascending series of characters. 2. Abalone is divided into several evolutionary groups or phyletic lines within the suborder Ostreoida on the basis of several morphological characters. 3. These characterizations are based on the cladistic analysis of these morphological characters. 4.

The suborder Ostreoida is not a monophyletic group. 5. In the phyletic series, several species have been proposed as common ancestors, and this group of ancestral species is termed a 'hypothesis', and the lineages radiating from this hypothetical ancestor is termed a 'hypothesis'. 6. The present study, involving D-genomic DNA of four species of Abalone, provides further support for the hypothesis of a single ancestral species from which the three species in the genus Abalone, *Abalone livida*, *Haliotis tuberculata* and *Haliotis discus discus*, have branched off.

Q: get max() on multiple user columns I have a simple model, with a boolean field that stores whether the user is a manager of the item (here item is person, but the question is generic and I hope it doesn't matter in the problem). So I have, for example:

```
class Item(models.Model): name = models.CharField(max_length=100) manager = models.BooleanField()
class Thing(models.Model): item = models.ForeignKey(Item) other_foo =
```
